The objective of the project “Puerto Rico 1930 Georeferenced: A coastal Mosaic “was to georeference the 1930 aerial photographs for the coastal areas of Puerto Rico and make them available to the scientific community and the general public in a website. In this presentation, I will describe the process of georeference, the output of the project and some of its applications. I will also present some subsequent work that is being conducted to georeference additional aerial photographs for studying landscape change in coastal areas.
